# CROP BALING NETWRAP

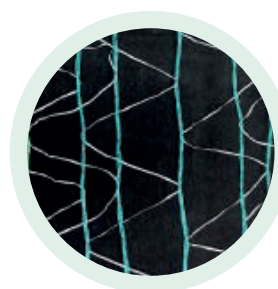

→ PRO PERFORMANCE RANGE

## CROSS X-PAND

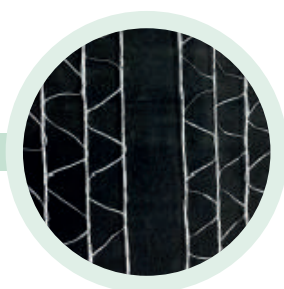

### DESIGN

**CROSS-WEFT DESIGN** is a unique patented net where each weft connects three warps instead of two.

CROSS X-PAND

VS

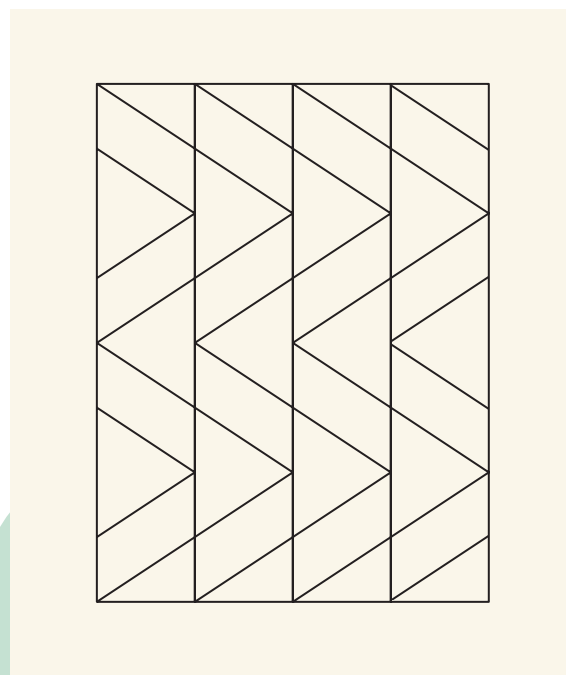

Other netwraps in the market  
with Standard Construction

### TECHNOLOGY

#### CROSS-WEFT TECHNOLOGY

Improves structural stability, prevents opening of the net on the bales and protects the crop much better.

#### FEATURES OF THE CROSS-WEFT TECHNOLOGY

Prevents Opening - If a warp or weft are cut, the netwrap will not open withholding the bale

Better coverage surface due to double thread:

- Withstands more pressure;
- Less dry matter loss from moisture and rain;
- Extra protection of the crop.
